SOLUTIONS FOR UTILITIES

NeST GIS is a Strategic Business Unit of the NeST Group with strong focus in offering GIS services on ESRI technologies, and is an ESRI-Authorized Business Partner. Successful planning of resources is the key to any development, and the success in planning and development depends on how accurate and cost effective our plans are. With core competencies in Geospatial Data development, Application development and Consultancy we offer GIS services in various verticals like Utilities, Cadastral Management, Urban planning, Environmental Management and Natural Resources Management, We assist Utility Companies, Counties and Municipalities in effective resource planning by providing consultancy, services in generation of intelligent database and automation of custom work flows and processes.

GIS DATA DEVELOPMENT

The need for mapping / updating features and facilities at regular intervals arises from changes in existing features in course of time or because of an increase in business demand either to improve operational efficiency or to manage risk. We offer the following GIS Mapping services.

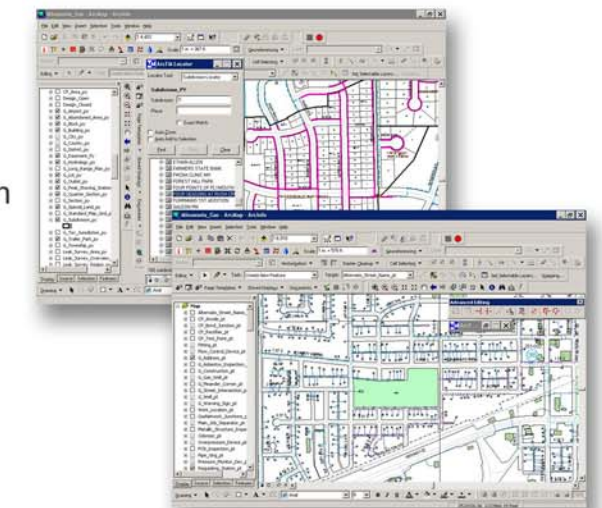

- * Data conversion services for landbase and utilities
- * Digitization services using remote sensing data
- * Map conflation services
- * Geocoding of databases
- * Geo-coding of databases

GIS APPLICATION DEVELOPMENT

Custom GIS Application development facilitates providing additional capabilities and develops newer functionalities to the application aimed at productivity gains and better automation of the business processes of the organization besides ensuring integration with other applications and easier sharing of data. We offer GIS Application Development services for, but not limited to the following..

- * Custom Application Development services primarily on ESRI technologies.
 - Desktop
 - Web based
 - Mobile /PDA based
- * Application Re-Engineering / Technology Migration from legacy systems to latest ESRI platform.
- * Application maintenance and support

GIS CONSULTANCY

NeST GIS has a core team of technical consultants with competency in Spatial Database Design, IT, GIS and Remote Sensing. We offer consultancy services starting from User Needs Assessment, Studying Existing Data, Hardware and Software Infrastructure, Functional requirement Documentation, Geodatabase Design and Enterprise System Architecture Design. We offer Functional consultancy services for the following.

- * User Needs Study
- * Data modeling, custom and Industry standard Database design
- * Data dictionary and Metadata documentation
- * Onsite Deployment, Maintenance & Support
